PERSONAL STATEMENT

First Class Computer Science graduate with experience in full-stack software development and applied AI. Skilled in building scalable web applications, leveraging APIs, and AI-powered solutions using React, Node.js, Python, and more. Passionate about developing practical, user-focused software and eager to contribute as an AI Engineer, AI Developer, or Full Stack Developer.

EDUCATION

First Class Bachelor (Hons) in Computer Science

Oct 2023 - June 2026

University of West London

RAK

EXPERIENCE

Full Stack AI Developer Intern

April 2025 - June 2026

Dots Information Systems

Dubai

- Transitioned into a Full Stack AI Developer role, contributing to the development of Dsuite, a group of cloud-based hospitality products for hotel operations and guest experience.
- Built scalable full-stack applications using React, TypeScript, Node.js, Express, Next JS, Python, and MongoDB.
- Developed REST APIs, backend services, and data pipelines supporting guest management, automation, analytics, and reporting.
- Worked with both MongoDB and SQL databases to manage application data, reporting, and analytics while integrating third-party hospitality systems and external APIs.
- Integrated AI-powered features, including conversational interfaces, intelligent automation, and AI-assisted decision support using Python services and LLM APIs.
- Collaborated with cross-functional teams throughout the software development lifecycle, contributing to solution design, testing, deployment, and scalable system architecture.

Co - Founder

June 2025 - Jan 2026

Morphize AI Solutions

Dubai

- Co-founded an AI agency delivering AI-powered software, business automation, and custom web solutions for small and medium-sized businesses.
- Designed and developed full-stack websites, web applications, and AI-driven solutions tailored to client requirements using modern JavaScript and Python technologies.
- Built AI automation workflows by integrating LLMs, APIs, and automation platforms to streamline business operations and improve efficiency.
- Led lead generation, client outreach, sales consultations, and proposal development. Worked directly with clients throughout the project lifecycle, from requirements gathering and solution design to development, deployment, and ongoing support.

Flutter & Mobile Development Intern

June 2024 - April 2025

Dots Information Systems

Dubai

- Contributed to internal tools and hospitality-focused mobile applications used by hotels across the world using Flutter, Java, and Kotlin.
- Developed UI components, integrated REST APIs, and connected applications with Microsoft SQL databases.
- Worked on both the front-end & back-end of flutter-based mobile applications, leveraging various tools & SDKs throughout.
- Integrated software with hardware such as kiosks, NFC readers and document scanners.
- Created interactive wireframes, planned database/API integration, and implemented role-based admin features.

PROJECTS

Aletheia: Dual-Stream Deepfake Detection Forensic Suite

Oct 2025 - May 2026

Final Year Project | MERN, Python, Flask, TensorFlow/Keras, Computer Vision, Explainable AI

- Developed a full-stack AI forensic decision-support platform for compressed-media deepfake detection, integrating a React/Vite frontend, Node.js/Express backend, Flask AI engine, MongoDB persistence, and PDF report generation.
- Designed and implemented a dual-stream deep learning pipeline using EfficientNet-B0 for RGB spatial analysis and Level-2 Haar DWT with a custom CNN for frequency-domain artifact detection.
- Built a Gated Mutual Attention fusion model to combine spatial and frequency feature vectors, achieving 84.84% accuracy and 0.9151 F1-score on the FaceForensics++ c40 test set.
- Integrated Grad-CAM visual explanations and LLM-generated narrative summaries to improve model interpretability beyond black-box probability scores.
- Implemented real-time analysis progress streaming using Server-Sent Events, archived report storage in MongoDB, and comparative dashboard views for baseline vs dual-stream results.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, Dart, HTML/CSS, SQL

Frameworks & Technologies: React, Vite, Node.js, Express.js, Next.js, FastAPI / Flask, Flutter, TensorFlow, Keras, OpenCV

AI & Automation: Prompt Engineering, LLM APIs, AI Integration, Pandas, NumPy, scikit-learn, Deep Learning, MTCNN, Grad-CAM, Explainable AI (XAI), Model Evaluation, RAG

Databases: MongoDB, PostgreSQL / MySQL, Firebase, Supabase

Developer Tools: Git, GitHub, Claude Code, Antigravity, VS Code, Android Studio, Figma, Cursor, Canva

Software Engineering: REST APIs, MERN Stack, Agile Development, OOP, Software Testing & Debugging

LANGUAGES

English (Native) | Urdu (Native) | Hindi (Native)
